

SATOSHICASH

The Fair Crypto Token On Core Chain

INTRODUCTION

SatoshiCash is an ERC20 token developed on Core Chain Blockchain by a group of “fair crypto” enthusiasts. Inspired by the ultimate sound currency model, Bitcoin of Satoshi Nakamoto, the crypto industry had speedy evolution over the past decade with much emphasis on scalability and security. First Bitcoin, then comes Ethereum, and finally Core. The recent boom in DeFi in the core ecosystem reaffirms the fact that the blockchain industry is still very young with endless possibilities. SatoshiCash is built with a protocol of fairness that creates intrinsic value.

PROBLEM

Crypto ecosystems are stuck in endless cycle of pumps and dumps. A more unfortunate act is rug-pulls, removing liquidity and leaving investors rekt. The larger population in core ecosystem is made up of crypto newbies who, more often than not, FOMO in these kinds of tokens and get stuck forever. Over the years, this problem scares everyday people from exploring myriad opportunities. Hence, slows adoption.

SOLUTION

With SatoshiCash’s outstanding ‘Hold to Earn’ and ‘Burn to Earn’ functions, we have achieved a fair crypto token which incentivizes users for holding STC tokens. Passive income in STC reflection creates intrinsic value for the token. Users simply buy SatoshiCash token (STC) and hold to earn rewards. It does not matter whether the price pumps or dumps. A 4% transaction fee is deducted from every transaction as follows: 2% sent to the contract reward pool for Burn2Earn function, 1% sent to a marketing wallet for marketing purposes and 1% for Hodl2Earn reflection. The contract takes snap shot of top 10 STC Burners every day at 00:00UTC and distributes 100% of the reward pool to them as follows:

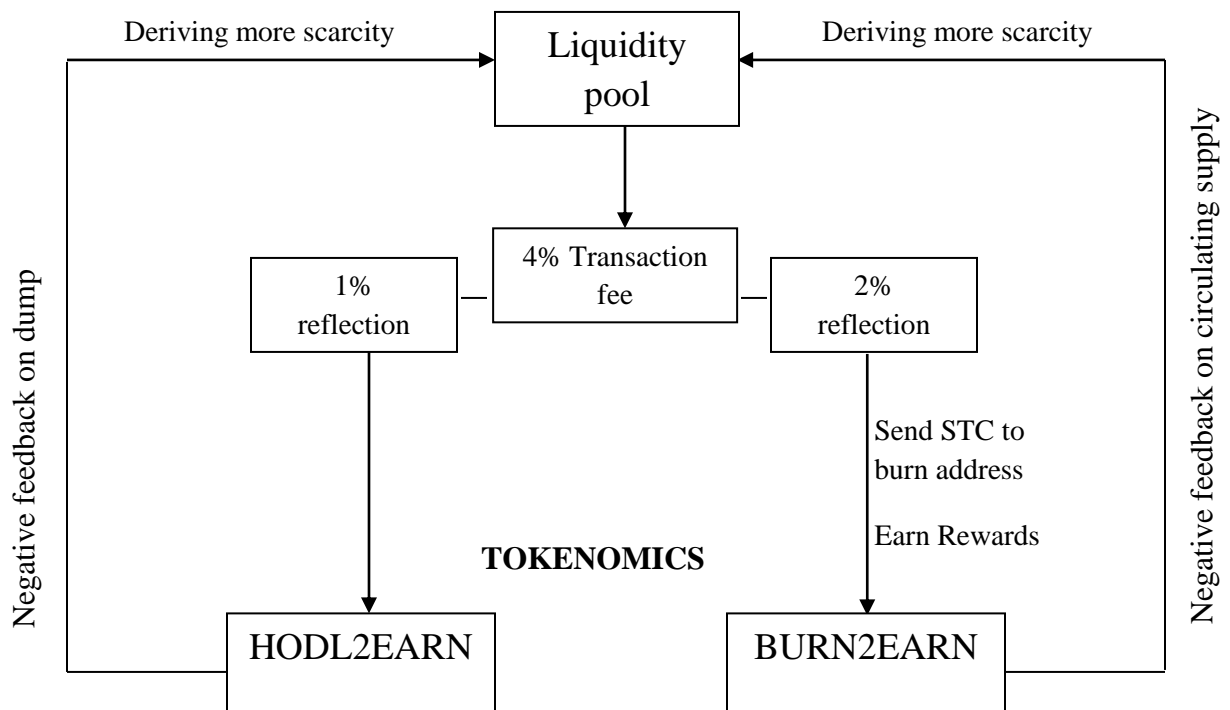

- ★ Top 1 burner: 35%
- ★ Top 2 burner: 20%
- ★ Top 3 burner: 15%
- ★ Top 4 burner: 10%
- ★ Top 5 burner: 6%
- ★ Top 6 burner: 5%
- ★ Top 7 burner: 3%
- ★ Top 8 burner: 2%
- ★ Top 9 burner: 2%
- ★ Top 10 burner: 2%

To burn STC, users simply send STC to the dead wallet below

```
0x00000000000000000000000000000000dead
```

The burn to earn function incentivizes burning of STC tokens while directly driving scarcity and ultimately, more value. A situation where the price dumps, users would rush to buy cheap and burn STC to seize the contract rewards.

With core chain's extreme low fees, secure and scalable blockchain technology, SatoshiCash brings DeFi at the finger-tips of everyday people with endless opportunities.

The token supply is capped at 10,000,000,000,000 STC. To kick start the token distribution, 60% (6,000,000,000,000 STC) is allocated for the community divided as 20% whitelist sale and 30% public sale.

The team allocation is capped at 10% (1,000,000,000,000 STC). 20% (2,000,000,000,000 STC) is allocated for liquidity, 5% (500,000,000,000 STC) for marketing purposes and 5% (500,000,000,000 STC) for treasury which will be used to fund project developments such as CEX listings.

TEAM

SatoshiCash is developed and managed by decentralized, anonymous team who work together ensuring trust in the code. SatoshiCash is a permission-less and trustless protocol with very minimal admin control and functions.

The team is always open for Audits and KYC for DAOs, Partners, DEXs, and CEXs. Kindly contact us at <https://t.me/+GxqVYTJevtE4MzE0>

DISCLAIMER

SatoshiCash token is developed for crypto enthusiasts to explore the opportunities in DeFi. By interacting with the token, you agree that you have fully understood how the token operates. This is not a guarantee of any investment plans or financial advice. DYOR!
